Verifikasi state: sebelum pencabutan `verifyCertificate` → **Valid**; sesudah → **Revoked**. `queryFilter` menemukan 1 event Issued dan 1 event Revoked untuk ID sertifikat. Data mentah: `deployments/localhost.json`, `deployments/localhost-interaction.json`.

Langkah reproduksi

```
npm install --legacy-peer-deps
npx hardhat compile
npx hardhat node                        # terminal 1 (biarkan berjalan)
npx hardhat run scripts/deploy.js --network localhost     # terminal 2
npx hardhat run scripts/interact.js --network localhost
```

Catatan: address dan hash bersifat deterministik hanya jika node baru dan urutan perintah identik; hasil pada mesin lain dapat berbeda pada nilai `deployedAt`.
